Black Infant Mortality Reduction

BIMR

MISSION

*The **Black Infant Mortality Reduction Program** mission is to decrease death rates among infants of African descent through education, support and guidance to pregnant women, health policy advocacy, and by promoting health disparity agendas that focus and target the many areas that greatly affect Black Infant Mortality Reduction.*

The HPC BIMR program works to achieve this goal by:

- **Increasing** professional and public awareness;
- **Providing** education and training to providers and consumers;
- **Improving** cultural competency;
- **Promoting** increased research;
- **Implementing** strategies to decrease the frequency of low birth weight infants;
- **Mobilizing** the community towards its own greater empowerment.

The Hudson Perinatal BIMR Vision:

Every Black woman deserves a healthy pregnancy and, after safe delivery, a healthy infant. The Black Infant Mortality Reduction Resource Center is committed to ensuring that women of color in Hudson County experience optimal maternal and child health for themselves and their families.
